

Don't let frost and snow delay your work!
Get our outdoor heating mats

HANDYHEAT[®]

OUTDOOR HEATING MATS

Does your construction, nursery or farm need to keep up the pace all through winter? Then our outdoor heating mats are a great choice. You can use them in various scenarios:

- » Thaw out frozen ground
- » Protect sprouting seeds
- » Keep walkways free from frost and snow
- » Keep concrete and mortar free from frost and snow
- » Protect newly bricked walls from frost damage

Particularly in construction it's a big advantage to use outdoor heating mats on fresh concrete and mortar. By keeping the frost off, you ensure a fast and efficient hardening that gives the complete building the best strength and longevity.

Our outdoor heating mats are fast and easy to use. Simply roll them out, place an isolating mat on top and plug them in. After a short wait, you're back to work without delays due to frost or snow.

HandyHeat outdoor heating mats are 50 cm wide, and are available in lengths from 2 to 24 meters.

For maximum effect, remember to use an isolating mat on top of the heating mats.

Order your heating mats before winter gets in the way of your next project.
